### RATINGS

<b>Performance</b>	★★★★☆
<b>Features</b>	★★★★☆
<b>Design</b>	★★★★☆
<b>Value</b>	★★★★☆

+ Fast printing speed  
 Easy setup  
 High yield ink cartridges

- Grainy colour images

The high capacity colour cartridges aren't just only easy to install, but also long lasting

The single USB 2.0 cable can be hidden under the scanner to conceal wiring and make your work area look more organised

# Another Reliable Brother

Brother's latest printer proves its worth for the productive individual or organisation that deals with a lot of printouts *By Nicolas See Tho*

This month, we are featuring the latest in personal printing technology with the Brother MFC-J200 InkBenefit. Made by the Japanese electronics giant Brother, let's see how it holds up after we put it through its paces.

In terms of design and build, we feel that the size of the printer is really suitable for the individual as it is not bulky and it is quite lightweight. This printer is also very easy to set-up, as there is only one connecting USB port to the desktop. Loading up paper was also surprisingly easy thanks to the portable paper feeder that can be detached from the main printer body.

As the MFC-J200 is a multi-function device, it comes with the ability to scan, copy, fax and print documents. It also features Wi-Fi capabilities that can connect to either your PC via the wireless network or via the iPrint & Scan app for the iPhone or iPad. The printer also has an Automatic Document Feeder (ADF) which makes unattended copying, faxing and scanning a much easier task as well as the added convenience of the printer's Multi-Function Centre stack and sort capabilities. The MFC-J200 also allows you to scan documents directly to your Apple gadgets to which you would be able to share the file across your wireless network. It is also built with the Laminated Piezo Print Head technology

which provides enhanced durability and helps save on repair costs.

Moving on to the performance, the results were mixed as it does some things well while others just okay. During our test we found that the print quality when it came to coloured images looked faded and grainy while mono printing provided high quality prints. With its printing speed of 27 sheets a minute for black and white documents, it does perform quickly in delivering multiple documents. Another interesting feature included in this printer is their high yield cartridges which provide two important benefits, one is the savings the consumers stand to gain due to replacing less ink cartridges and the other is the time effectiveness of the feature, hence the consumer won't have to go out and buy more ink after just a month or two. 📄

### CHIP CONCLUDE :

We were generally quite impressed with the Brother MFC-J200 InkBenefit as it performed quickly and efficiently. Plus with its price tag of RM499, this is actually one of the most affordable multi-function printers available today and it would be a boon for homes or offices that do a lot of printing on daily basis.
