Easter Gifts

REQUIREMENTS:

- Brother ScanNCut machine
- Brother V3 Embroidery machine
- Embroidery 10 cm x 10 cm hoop
- Embroidery threads of own choice
- Scrapbooking paper of own choice
- Felt to embroider on

1

Photocopy Pdf template of the box on the pattern sheet (enlarge by 50%). Place paper template on the standard mat and scan into the ScanNCut machine (scan to cut).

2

Save the design. Open pattern and clean up the design you are cutting out. Use the low tack mat, cutting blade 3 – 3.5 and pressure 0. Cut out the box.

3

Take a ruler and fold all the pieces that need folding and measure window area that needs to be cut out.

4

At the embroidery machine hoop a piece of felt in a 10 cm x 10 cm hoop. (No stabilizer is being used).

Open the borders icon on your machine and choose a square patterned border. Size it till it is just smaller than the window in the box. Add a design and size it smaller so that it fits inside the border. Now add another border, square but with just a single outline and make it about 5 mm bigger than first one.

Now you can start to embroider. After the first border is finished remove the hoop and make sure the border fits inside the window.

5

Continue with embroidery until the last step. Remove the hoop. Tape some thin double-sided tape all around the back of the window and place it firmly over the embroidery. Replace the hoop and stitch the last step on the slowest speed.

6

Remove from the hoop and cut closely around the stitches to remove excess fabric. Fold the box and glue together. Embellish as preferred.
